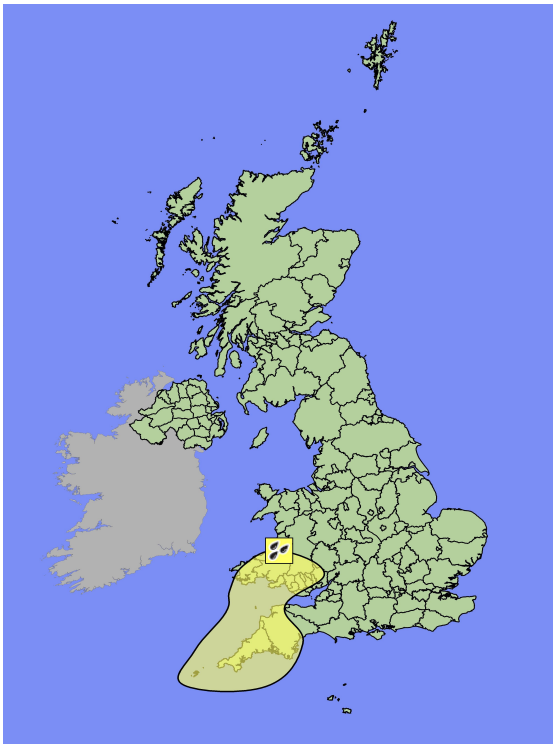
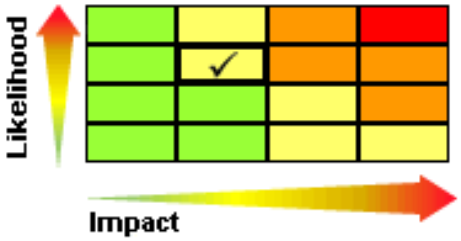
National Severe Weather Warning Service





Chief Forecasters Assessment
Another unseasonably deep depression is arriving on our shores, bringing distinctly poor weather, although generally not quite as bad as occurred a week ago.

Rain will gradually intensify during the second half of the day to give 10-20 mm quite widely and locally 30 mm or more over higher ground, particularly in south Wales. Strong winds will accompany the rain, gusting to 40-50 mph around exposed coasts and headlands.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **18:00 on Thu, 14th Jun 2012** until **23:59 on Thu, 14th Jun 2012**

Rain spreading northeastwards will become heavy and prolonged later today, giving many parts a spell of two to three hours of heavy rain. Strong winds will accompany the rain with gusts to gale strength around exposed coasts.

The public should be aware that this may lead to localised flooding in areas where the ground is already close to saturation, perhaps particularly across the south of Wales.
